

Wisconsin League of Conservation Voters

Endorsed Candidate Profile:

## Mandy Wright

**Office:** State Representative, AD 85

**Area of the state:** Wausau and eastern Marathon County

Why is **Mandy Wright** the best choice for conservation in this race?

### **Dedicated to conservation.**

Mandy Wright will work to ensure our water, land, air, and native species in Wisconsin are protected. Wright knows conserving resources and investing in cleaner energy sources is vital to our health and the long-term economy. Mandy was named a Conservation Champion – scoring a perfect 100% – by Wisconsin League of Conservation Voters for her work to conserve Wisconsin’s air, land, and water during the 2013-14 legislative session.

### **A proven leader.**

As a legislator, Mandy served on the Small Business, Agriculture, Education, and Consumer Protection Committees. She was ranking member of Urban Education and represented on the Rural Schools Task Force. She voluntarily served on the Legislative Council Early Childhood Brain Development Committee and was a board member for the Family Impact Seminar program. She is currently active with numerous community groups in her district.

### **A true Wisconsinite.**

Mandy was born and raised in Wausau, and grew up exploring the woods and Wisconsin River near her childhood home. Mandy is proud to support Wisconsin’s strong outdoor heritage and stewardship of our natural resources for industry, recreation, and tourism. She will continue our proud conservation tradition to grow both our current and future economy.

**When to vote:** General election, Tuesday, November 8th

“We’ve improved the quality of our water in Wisconsin since the days of my childhood. Here in Marathon County, local and state government as well as industry has worked closely with citizens, and improved our water and environment substantially. For example, between 2001 and 2010, the state of Wisconsin provided 220 farmers in our county with the education and technical assistance to utilize managed grazing. Implementing this agricultural technique not only reduced dairy farming’s contribution to water contamination but also helped farmers increase profitability.”
